PRODUCT INFORMATION

Brasso Print

Brasso Print (Immitation Burn Print)

(WATER BASED INK FOR BRASSO PRINTING)

Basic Information:

Brasso (Burn-Out) Print is a single component product which is to be used only on Cotton-Polyster blended fabrics. It gives brasso effect after curing and washing off of the fabric.

Printing Method:

(1) It is a ready to use ink and print it by applying two stroke directly by screen on the fabric.

(2) After printing let the print air dry for 2 to 4 hours and then send the fabric for curing at 130°C -150°C.

(3) After curing the print appears to be burned (darker shade than original dyed) White Fabric will look little more transparent.

Screen Mesh size:

Regular Mesh, Which you normally use for water based printing screens are used to print this material.

Curing Temperature :

Curing is done at 130°C to 150°C.

Precautions:

- (1) Do not dilute the product otherwise it won't have desired results.
- (2) The stability of the product is 20 - 25 days only.
- (3) Avoid direct contact with body. Thoroughly wash with water if in contact with ink.
